

Steam Games Market Analysis Dashboard

Data Visualization Final Project

GIREESH CHOWDARY TRIPURANENI

PYTHON · STREAMLIT · PLOTLY · PANDAS

Project Overview & Dataset

Objective

Interactive dashboard to analyze Steam game data — exploring market trends, genres, pricing, and user engagement.

Source

Steam Games Dataset — Kaggle

Key Dataset Features

Genre

Price

Reviews

Peak CCU

Metacritic

Platform

Data Preparation & Architecture

Built on a clean three-layer stack: **Pandas** for preprocessing, **Plotly** for interactive charts, and **Streamlit** for the web interface — featuring sidebar filters, KPI cards, and 4 interactive tabs.

Dashboard Overview

Overview

Market Analysis

Game Performance

Insights

Sidebar filters for genre, platform, price range, and date – KPI cards surface top-level metrics at a glance.

Key Visualizations

Top Reviewed Games

Counter-Strike 2 leads with
7.6M+ positive reviews

Genre Distribution

Indie & Action dominate the
Steam catalog

Platform Support

Windows: 125K+ games ·
Mac: 21K · Linux: 16K

Engagement Trends

Peak CCU and review volume
across titles

Market & Performance Analysis

Top Developers by Total Recommendations

Key Findings

- Positive reviews strongly correlate with recommendations ($r = 0.74$)
- Valve leads developer recommendations; Ubisoft Montreal close second
- Most high-review games are priced **under \$20**

Key Insights

Platform Dominance

Windows dominates platform support across the entire Steam catalog

Genre Landscape

Indie & Action are the most common genres by volume

Review → Recommendation

More positive reviews consistently drive more recommendations

Engagement Variance

User engagement varies significantly across titles — a few outliers dominate

Dynamic Exploration

Sidebar filters enable efficient, real-time dataset exploration

Conclusion

01

Built

Fully interactive Steam Games dashboard with Streamlit & Plotly

02

Applied

Preprocessing pipelines, KPI cards, and multi-tab visualization

03

Future

Steam API integration, real-time updates, and ML-powered recommendations
